TEACHER SUPPLY AND TRAINING

POLICY IMPLICATIONS OF THE HUMAN RESOURCE SURVEY

First Phase: Semi-Urban Villages

A Human Resource Survey conducted in 2763 semi-urban villages in the 20 districts of Balochistan suggests the following actions to ease constraints on enrollment. The order of the activities is based on the assumption that teachers are a more important resource than government facilities.

1. To increase enrollments as quickly as possible with available candidates

Sanction additional male and female teachers and assign them as appropriate to:

- Villages where no primary education opportunities exist but parents want to start education and are willing to provide interim facilities
- Villages which will accept mixed enrollments in primary schools, thereby increasing girls' enrollments
- Villages which will accept a male teacher for primary girls, thereby increasing girls' enrollments
- Villages which will use existing facilities in double shifts to increase student enrollments

2. <u>To increase enrollments where teacher distribution is a problem and/or female teachers are not available</u>

- Convert boys' schools to mixed schools where parents accept the idea of coeducation for primary girls
- Set up bussing programs between areas (usually urban) where teachers are available and villages where teachers needed
- Use appropriate males to teach females where parents accept the idea of males teaching primary students
- Recruit middle pass candidates where matrics not available

3. To increase enrollments where facilities are the limiting factor

Utilizing existing facilities

- Ask villages to provide a temporary facility (the government provides the teacher)
- Make use of mosques or other community structures (the government provides the teacher)

- Convert boys' schools to mixed schools where villagers accept this idea (the government provides extra teachers)
- Create shifts to utilize crowded schools (the government provides extra teachers for the second shift)

Constructing new facilities.

To increase enrollments quickly, construct new schools in:

- Villages where parents want primary education but it has not yet started and parents are willing to contribute resources
- Villages where girls are already attending boys' schools but many parents do not approve of coeducation

DO NOT construct schools in:

• Villages where crowding may be eased but enrollments will not increase

4. <u>Short and long term actions to increase the supply and improve the distribution of teachers for girls</u>. Short term activities improve the situation now and long-term activities improve the situation in the future.

Short-term (see policy papers on each of the following):

- Sanction additional teachers
- Bussing
- Coeducation
- Male teachers for girls
- Reducing qualifications where required to middle pass
- Temporary facilities

Long-term:

- Providing more middle and secondary programs for girls
- Upgrading primary schools where enrollments are high
- Utilizing AIOU certification programs

• Locating opportunities where girls will use them (per the survey)
